V6**FLOTEC® Mini-Size Flow Switches**

Monitor flow in 1/2" to 2" pipe, Explosion-proof

Scan here to watch product video

SURPRISINGLY COMPACT. The Series V6 FloTec® Flow Switch is engineered to specifically monitor liquid, gas, or airflows. Operation is simple and dependable with no mechanical linkage as the flow switch is magnetically actuated. The lower body holds the flow vane and one magnet, which controls the switch actuating magnet in the separate upper housing. In most applications the switch is normally off with the pipeline flow forcing the vane against the vane spring. As the flow decreases the vane spring pushes back the vane, actuating the switch to signal an alarm or shutdown. Tees are available for installation in pipelines from 1/2" to 2", with bushings added the unit is easily adapted to 1/4" and 4/8" piping.

FEATURES

- Leak proof lower body machined from bar stock.
- Choice of models in a tee with calibrated vane or field adjustable trimmable vane.
- Vane can be adjusted from 0 to 100% open.
- Explosion-proof listing included in specifications.
- Electrical assembly can be easily replaced without removing the unit from the installation so that the process does not have to be shut down.
- High pressure rating of 1000 psig (69 bar) with brass body and 2000 psig (138 bar) on the 303 SS body (see specifications).
- Low flow model offers field adjustable set point.
- Easy installation, simply insert the tee in the pipeline and complete electrical connections.

APPLICATIONS

- Protects pumps, motors and other equipment against low or no flow.
- Controls sequential operation of pumps.
- Automatically starts auxiliary pumps and engines.
- Shuts down burner when air flow through heating coil falls.
- Controls dampers according to flow.

V6 Low Flow Set Point Chart

Min-Max Flow Rates in 1/2" Pipe		
Media	Actuate	Deactivate
GPM-Water	.04-0.75	.03-0.60
LPM-Water	15-2.84	11-2.27
SCFM-Air	.18-2.70	.15-2.0
LPS-Air	.09-1.3	.07-.95

Pressure drop (head loss) is a function of both set point and flow rate. Typically, pressure drop at actuation flow rate listed will be 5-10 psid (.34-.69 bar). Pressure drops at other flow rates will vary in proportion to the change in flow.

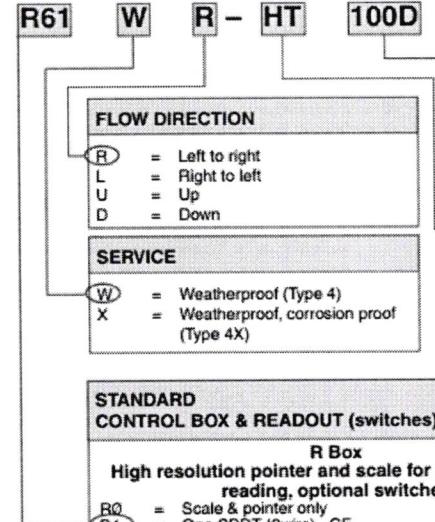

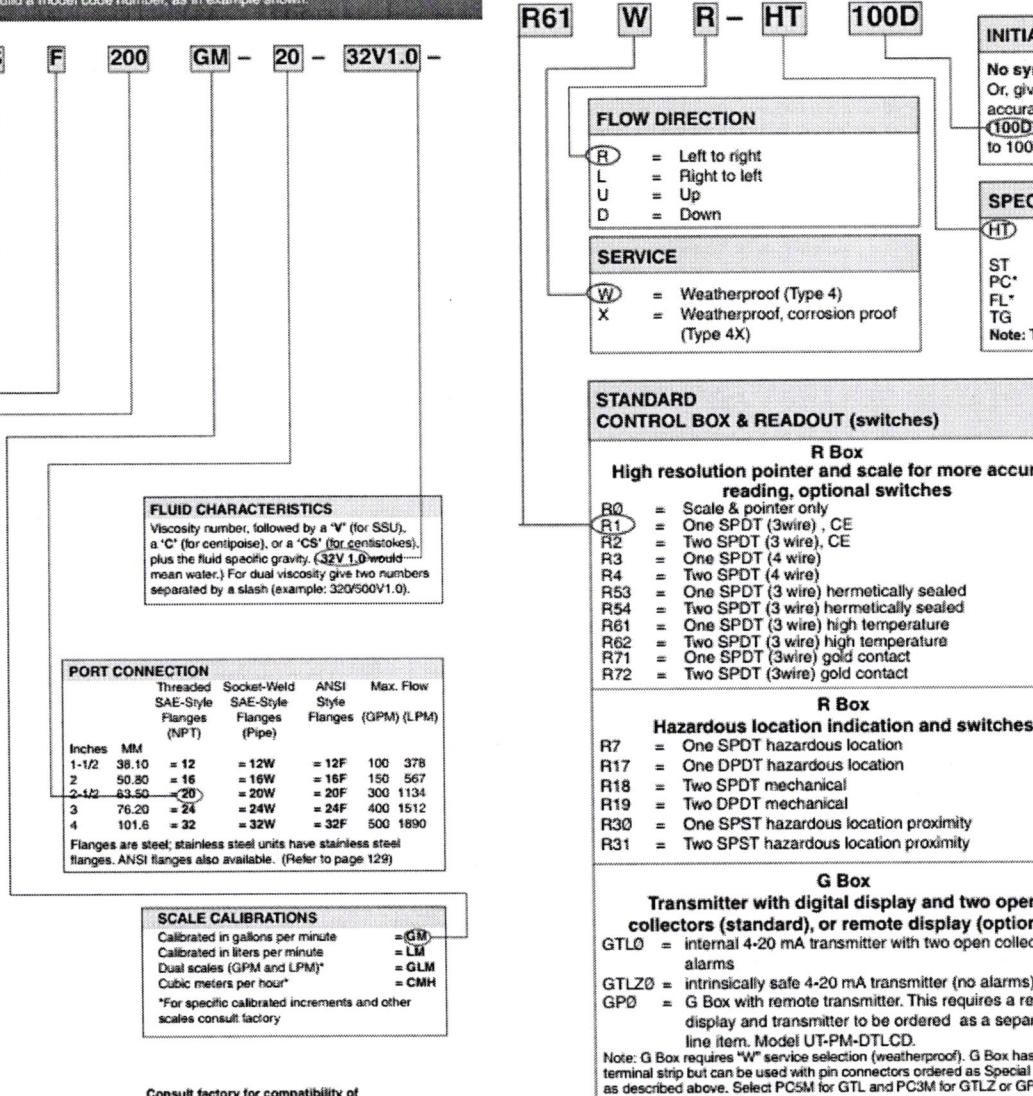

HOW TO ORDER Select appropriate symbols and build a model code number, as in example shown:

INITIAL SWITCH SETTING

No symbol = Lowest possible

AC symbol - \square = open position
Or, give setting(s) in GPM, LPM, etc. Also a symbol to indicate that accuracy is desired during increasing flow (U) or decreasing flow (D). **1000D** would mean that switch will actuate when flow rate decreases to 100 GPM. Settings are field adjustable.

SPECIAL OPTIONS

(HT) = High-temp. 400°F for A & R Box
 (300°F for transmitter options GT, RT & TT Boxes)
ST = Stainless steel ID tag
PC* = Pin connector with 3-6 pins, mini and micro style available
FL* = Fault light(s)
TG = Tempered glass window
 Note: These options are described more fully in "Options for Vane and Piston style flowmeters."
